PRODUCT OVERVIEW

The 108M12-HV industrial IP67 rated Ethernet switch is designed to meet the most demanding industrial communications requirements while providing high throughput and minimum downtime.

The 108M12-HV provides eight auto sensing 10/100BaseTX ports with M12, D-coded, 4 pin, female, style connectors. All ports are full/half duplex capable, using "state of the art" Ethernet switching technology. The 108M12-HV auto-negotiates the speed and flow control capabilities of the eight TX port connections, and configures itself automatically.

Since the 108M12-HV is auto sensing, there will be no need to make extensive wiring changes if upgrades are made to the host computers, plant systems, or Ethernet I/O modules.

The switching fabric simply scales up or down automatically to match specific network environments.

The 108M12-HV supports up to 2,000 MAC addresses, enabling these products to support extremely sophisticated and complex network architectures.

For applications requiring IP67 protection, the 108M12-HV is an ideal candidate for upgrading existing hubs and repeaters to increase bandwidth and determinism by virtually eliminating network collisions. The 108M12-HV is an affordable network solution and maintains the plug & play simplicity of the unmanaged hub.

The 108M12-HV can simplify plant wiring by eliminating the need to bring data acquisition and control network connections back to a climate controlled environment. The 108M12-HV has extended operating environmental specifications to meet the harsh needs of industrial environments. For cost savings and convenience this network switch can be bulkhead or DIN-Rail mounted alongside other waterproof industrial equipment.

To increase reliability the 108M12-HV provides dual redundant power inputs of 10-30 VDC or 10-60 VDC with high voltage option. LEDs are provided to display the link status and activity of each port.
