Industrial Ethernet Real-time Device Servers™

Sixnet Device Servers™

RL RED LION®

►►► Ethernet Real-Time Device Servers

The Sixnet serial to Ethernet device servers are ideal for connecting your serial-based software applications over Ethernet to your remote serial devices.

These high performance devices deliver a truly rugged solution in a very compact size. The DS device servers are easy to use and at the same time extremely flexible, offering the latest in advanced IP technology. Use the supplied Quick Configurator for fast setup or the powerful Device Manager for more advanced configurations.
PRODUCT HIGHLIGHTS

> Auto-detecting 10/100 RJ45 Ethernet port

> Universal EIA-RS232/422/485 interface is software selectable which prevents field tampering

> Serial data tunneling across an IP network with full support for back to back (paired mode) operation

> Advanced security through AES / 3DES encryption over SSH or SSL sessions (SDS model)

> Next Generation IP support (IPV6) for investment protection and network compatibility

> Port buffering for data capture and analysis

> For console management applications, powerful authentication schemes prevent unauthorized access

> Device Management software for centralized management and control

> COM or TTY port control and management for serial-based applications

FEATURES & BENEFITS
