

Secure Industrial Router

Red Lion's RAM-6021 industrial routers provide secure network communication between local and wide area networks.

With a rugged design and flexible platform, the routers provide the ability to remotely connect, monitor and control assets across a variety of industrial applications. The RAM-6021's web based event engine can be customized to trigger I/O or email alerts, to quickly notify personnel of critical events based on operational data. Add in robust security features, which include a stateful firewall, NAT translations and VPN connections, and the RAM-6021 delivers a compact all-in-one solution that seamlessly connects to existing Ethernet infrastructures, including networks with Modbus and DNP3 enabled devices.
