MODEL CUB®5P - MINIATURE ELECTRONIC 5-DIGIT PROCESS METER

● THREE SELECTABLE D.C. RANGES
  0 to 10 V, 0(4) to 20 mA, 0 to 50 mA
● MINIMUM AND MAXIMUM DISPLAY CAPTURE
● LCD, REFLECTIVE OR RED/GREEN LED BACKLIGHTING
● 0.48" (12.2 mm) HIGH DIGITS
● OPTIONAL SETPOINT OUTPUT CARD
● OPTIONAL SERIAL COMMUNICATION CARD (RS232 or RS485)
● OPTIONAL USB PROGRAMMING CARD
● OPERATES FROM 9 TO 28 VDC POWER SOURCE
● FRONT PANEL OR CRIMSON PROGRAMMABLE
● DISPLAY COLOR CHANGE CAPABILITY AT SETPOINT OUTPUT
● NEMA 4X/IP65 SEALED FRONT BEZEL

GENERAL DESCRIPTION

The CUB5 Series provides the user the ultimate in flexibility, from its complete user programming to the optional setpoint control and communication capability. The CUB5 accepts a DC voltage or current input signal and provides a display in the desired unit of measure. The meter also features minimum and maximum display capture, display offset, units indicator, and programmable user input. The display can be toggled either manually or automatically between the selected displays.

The CUB5 display has 0.48" (12.2 mm) high digits. The LCD is available in two versions, reflective or red/green backlight. The backlight version is user selectable for the desired color and also has variable display intensity. The capability of the CUB5 can be easily expanded with the addition of option cards. The setpoint output cards are field installable with programmable setpoints. Serial communications capability for RS232 or RS485 can be added with a serial option card.

The CUB5 can be powered from an optional Red Lion Micro-Line/Sensor Power Supply (MLPS), which attaches directly to the back of a CUB5. The MLPS is powered from 85 to 250 VAC and provides up to 400 mA to drive the unit and sensors.

INPUT

The CUB5P is a DC Process meter. It features voltage and current input ranges, that are selected by the user via a programming jumper and software input range selection. The ranges consist of the following: 0 to 10 V, 0(4) to 20 mA, or 0 to 50 mA. Users should select the appropriate voltage range that covers their maximum input.

SAFETY SUMMARY

All safety related regulations, local codes and instructions that appear in this literature or on equipment must be observed to ensure personal safety and to prevent damage to either the instrument or equipment connected to it. If equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Do not use this meter to directly command motors, valves, or other actuators not equipped with safeguards. To do so can be potentially harmful to persons or equipment in the event of a fault to the meter.

CAUTION: Risk of Danger.
Read complete instructions prior to installation and operation of the unit.

CAUTION: Risk of electric shock.

DIMENSIONS In inches (mm)

Note: Recommended minimum clearance (behind the panel) for mounting clip installation is 2.15" (54.6) H x 3.00" (76.2) W.
**GENERAL METER SPECIFICATIONS**

1. **DISPLAY**: 5 digit LCD 0.48" (12.2 mm) high digits  
   CUB5PR00: Reflective LCD with full viewing angle  
   CUB5PB00: Transmissive LCD with selectable red or green LED backlight, viewing angle optimized. Display color change capability with output state when using an output module.

2. **POWER**: Input voltage range is +9 to +28 VDC with short circuit and input polarity protection. Must use an RLC model MLPS or an NEC Class 2 or Limited Power Source (LPS) rated power supply.

3. **INPUT RANGES**: Jumper Selectable  
   - 0 to 10 V, 0(4) to 20 mA, 0 to 50 mA

4. **SENSOR INPUTS**:  
   - **INPUT RANGE**: 20 / 50 mA  
   - **ACCURACY**: @23 °C, less than 85% RH  
   - **INPUT IMPEDANCE**: 10 Ω  
   - **MAX INPUT SIGNAL**: 150 mA  
   - **RESOLUTION**: 1 μA  
   - **TEMP. COEFFICIENT**: 70 ppm / °C

5. **OVERRANGE RATINGS, PROTECTION & INDICATION**:  
   - 9 to 28 VDC power circuit is not isolated from the signal circuit.  
   - **Input Overrange Indication**: “ULUL”  
   - **Input Underrange Indication**: “OLOL”  
   - **Display Overrange/Underrange Indication**: “....”/“....”  

6. **RESPONSE TIME**:  
   - **Display**: 500 msec min.  
   - **Output**: 800 msec max (with input filter setting of 0)

7. **NORMAL MODULATION DESTRUCTION**: 60 dB 50/60 Hz

8. **USER INPUT (USR)**: Programmable input. Connect USR terminal to USR COMM to activate function. Internal 10KΩ pull-up resistor to +9 to 28 VDC.  
   - **Threshold Levels**:  
     - $V_{IL} = 0.7$ V max; $V_{IH} = 2.4$ V min  
     - $V_{MAX} = 28$ VDC  
   - **Response Time**: 5 msec typ.; 50 msec debounce (activation and release)

9. **CONNECTIONS**: Wire clamping screw terminals  
   - **Wire Strip Length**: 0.3" (7.5 mm)  
   - **Wire Gauge**: 30-14 AWG copper wire  
   - **Torque**: 3.5 inch-lbs (0.395 N-m) max.

10. **MEMORY**: Nonvolatile EEPROM memory retains all programming parameters and max/min values when power is removed.

11. **ENVIRONMENTAL CONDITIONS**:  
    - **Operating Temperature Range for CUB5PR00**: -35 to 75 °C  
    - **Operating Temperature Range for CUB5PB00** depends on display color and intensity level as per below:  
      
      | INTENSITY LEVEL | TEMPERATURE |
      |-----------------|-------------|
      | Red Display     | -35 to 75 °C|
      | 1 & 2           | -35 to 75 °C|
      | 3               | -35 to 70 °C|
      | 4               | -35 to 60 °C|
      | 5               | -35 to 50 °C|
      | Green Display   | -35 to 75 °C|
      | 1 & 2           | -35 to 70 °C|
      | 3               | -35 to 65 °C|
      | 4               | -35 to 50 °C|
      | 5               | -35 to 35 °C|

    - **Storage Temperature**: -35 to 85 °C  
    - **Operating and Storage Humidity**: 0 to 85% max. relative humidity (non-condensing)  
    - **Vibration to IEC 68-2-6**: Operational 5-500 Hz, 5 g  
    - **Shock to IEC 68-2-27**: Operational 30 g  
    - **Altitude**: Up to 2000 meters

12. **CERTIFICATIONS AND COMPLIANCES**:  
    - **CE Approved**  
    - **EN 61326-1**: Immunity to Industrial Locations  
    - **Emission CISPR 11 Class A**  
    - **Safety requirements for electrical equipment for measurement, control, and laboratory use**:  
      - **EN 61010-1**: General Requirements  
      - **EN 61010-2-030**: Particular Requirements for Testing and Measuring Circuits  
    - **RoHS Compliant**  
    - **UL Recognized Component**: File #E179259  
    - **UL Listed**: File #E137808  
    - **Type 4X Indoor/Outdoor Enclosure rating (Face only)**  
    - **IP65 Enclosure rating (Face only)**  
    - **IP20 Enclosure rating (Rear of unit)**  
    - **Refer to EMC Installation Guidelines section of the bulletin for additional information.**

13. **CONSTRUCTION**: This unit is rated for Type 4X/IP65 requirements for indoor/outdoor use. Installation Category 1, Pollution Degree 2. High impact plastic case with clear viewing window. Panel gasket and mounting clip included.

14. **WEIGHT**: 3.2 oz (100 g)
## Optional Plug-in Cards

### Adding Option Cards
The CUB5 meters can be fitted with optional output cards and/or serial communications cards. The details for the plug-in cards can be reviewed in the specification section below. The plug-in cards, that are sold separately, can be installed initially or at a later date.  

**Warning:** Disconnect all power to the unit before installing Plug-in card.

**Note:** Measurement errors may occur if signal input common is shared with another circuit common (ie, serial common, Dual Sinking Output option card, or Power Supply common) on multiple units.

### Single Relay Card
**Type:** Single FORM-C relay  
**Isolation To Sensor & User Input Commons:** 1400 Vrms for 1 min.  
**Working Voltage:** 150 Vrms  
**Contact Rating:** 1 amp @ 30 VDC resistive; 0.3 amp @ 125 VAC resistive  
**Life Expectancy:** 100,000 minimum operations

### Dual Sinking Output Card
**Type:** Non-isolated switched DC, N Channel open drain MOSFET  
**Current Rating:** 100 mA max.  
**$V_{DS\,ON}$:** 0.7 V @ 100 mA  
**$V_{DS\,MAX}$:** 30 VDC  
**Offstate Leakage Current:** 0.5 mA max.

### RS485 Serial Communications Card
**Type:** RS485 multi-point balanced interface (non-isolated)  
**Baud Rate:** 300 to 38.4k  
**Data Format:** 7/8 bits; odd, even, or no parity  
**Bus Address:** 0 to 99; max 32 meters per line  
**Transmit Delay:** Selectable (refer to CUB5COM bulletin)

### RS232 Serial Communications Card
**Type:** RS232 half duplex (non-isolated)  
**Baud Rate:** 300 to 38.4k  
**Data Format:** 7/8 bits; odd, even, or no parity

### USB Programming Card
**Type:** USB virtual comms port  
**Connection:** Type B  
**Baud Rate:** 300 to 38.4k  
**Unit Address:** 0 to 99

## 1.0 Installing the Meter

### Installation
The meter meets NEMA 4X/IP65 requirements when properly installed. The unit is intended to be mounted into an enclosed panel. Prepare the panel cutout to the dimensions shown. Remove the panel latch from the unit. Slide the panel gasket over the rear of the unit to the back of the bezel. The unit should be installed fully assembled. Insert the unit into the panel cutout.  

While holding the unit in place, push the panel latch over the rear of the unit so that the tabs of the panel latch engage in the slots on the case. The panel latch should be engaged in the farthest forward slot possible. To achieve a proper seal, tighten the latch screws evenly until the unit is snug in the panel (Torque to approx. 28 to 36 in-oz [0.202 to 0.26 N-m]). Do not over-tighten the screws.

### Installation Environment
The unit should be installed in a location that does not exceed the operating temperature and provides good air circulation. Placing the unit near devices that generate excessive heat should be avoided.  

The bezel should only be cleaned with a soft cloth and neutral soap product. Do NOT use solvents. Continuous exposure to direct sunlight may accelerate the aging process of the bezel.  

Do not use tools of any kind (screwdrivers, pens, pencils, etc.) to operate the keypad of the unit.

## 2.0 Setting the Jumpers

### Input Range Jumper
This jumper is used to select the proper input range. The input range selected in programming must match the jumper setting. Select a range that is high enough to accommodate the maximum input signal to avoid overloads. To access the jumper, remove the rear cover of the meter.

**Warning:** Exposed line voltage exists on the circuit boards. Remove all power to the meter and load circuits before accessing inside of the meter.

### Remove/Replace the Rear Cover
To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.
3.0 INSTALLING PLUG-IN CARDS

The Plug-in cards are separately purchased option cards that perform specific functions. The cards plug into the main circuit board of the meter.

4.0 WIRING THE METER

WIRING OVERVIEW

Electrical connections are made via screw-clamp terminals located on the back of the meter. All conductors should conform to the meter’s voltage and current ratings. All cabling should conform to appropriate standards of good installation, local codes and regulations. It is recommended that the power supplied to the meter (DC or AC) be protected by a fuse or circuit breaker.

Strip the wire, leaving approximately 0.3” (7.5 mm) bare lead exposed (stranded wires should be tinned with solder.) Insert the lead under the correct screw-clamp terminal and tighten until the wire is secure. (Pull wire to verify tightness.) Each terminal can accept up to one #14 AWG (2.55 mm) wire, two #18 AWG (1.02 mm), or four #20 AWG (0.61 mm).

EMC INSTALLATION GUIDELINES

Although Red Lion Controls Products are designed with a high degree of immunity to Electromagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into a unit may be different, depending somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.

1. A unit should be mounted in a metal enclosure, which is properly connected to protective earth. This is especially useful in applications where cable runs are long.

2. Use shielded cables for all Signal and Control inputs. The shield connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness.

   a. Connect the shield to earth ground (protective earth) at one end where the power circuit is not isolated to an output common. This would cause EMI on the sensitive input common, which could affect the instrument’s operation.

   b. If a DC inductive load (such as a DC relay coil) is controlled by a transistor switch, care must be taken not to exceed the breakdown voltage of the transistor when the load is switched. One of the most effective ways is to place a diode across the inductive load. Most RLC products with solid state outputs have internal zener diode protection. However external diode protection at the load is always a good design practice to limit EMI.

   c. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is over 1 MHz.

3. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors, feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run through metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter. Also, Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.

4. Long cable runs are more susceptible to EMI pickup than short cable runs.

5. In extremely high EMI environments, the use of external EMI suppression devices such as Ferrite Suppression Cores for signal and control cables is effective. The following EMI suppression devices (or equivalent) are recommended:

   - Fair-Rite part number 0443167251 (RLC part number FDCOR0000)
   - Line Filters for input power cables:
     - Schaffner # FN2010-1/07 (Red Lion Controls # LFIL0000)
   - Varistor: ILS11500 or ILS23000
   - RLC part numbers: Snubber: SNUB0000
     - Varistor: ILS11500 or ILS23000

6. To protect relay contacts that control inductive loads and to minimize radiated and conducted noise (EMI), some type of contact protection network is normally installed across the load, the contacts or both. The most effective location is across the load.

   a. Using a snubber, which is a resistor-capacitor (RC) network or metal oxide varistor (MOV) across an AC inductive load is very effective at reducing EMI and increasing relay contact life.

   b. If a DC inductive load (such as a DC relay coil) is controlled by a transistor switch, care must be taken not to exceed the breakdown voltage of the transistor when the load is switched. One of the most effective ways is to place a diode across the inductive load. Most RLC products with solid state outputs have internal zener diode protection. However external diode protection at the load is always a good design practice to limit EMI. Although the use of a snubber or varistor could be used.

7. Care should be taken when connecting input and output devices to the instrument. When a separate input and output common is provided, they should not be mixed. Therefore a sensor common should NOT be connected to an output common. This would cause EMI on the sensitive input common, which could affect the instrument’s operation.

Visit RLC’s web site at http://www.redlion.net/emi for more information on EMI guidelines, Safety and CE issues as they relate to Red Lion Controls products.

4.1 POWER WIRING

DC Power

+9 to +28 VDC: +VDC
Power Common: -VDC

CAUTION: 9 to 28 VDC power circuit is not isolated from the signal circuit.

4.2 USER INPUT WIRING

Sinking Logic

USR COMM
Connect external switching device between the
USR
User Input terminal and User Input Common.

The user input of the meter is internally pulled up to +9 to +28 V with 10 K resistance. The input is active when it is pulled low (<0.7 V).

CAUTION: The Plug-in cards and main circuit board contain static sensitive components. Before handling the cards, discharge static charges from your body by touching a grounded bare metal object. Ideally, handle the cards at a static controlled clean workstation. Also, only handle the cards by the edges. Dirt, oil or other contaminants that may contact the cards can adversely affect circuit operation.

REMOVE/REPLACE THE REAR COVER

To remove the rear cover, locate the cover locking tab below the 2nd and 3rd input terminals. To release the tab, insert a small, flat blade screwdriver between the tab and the plastic wall below the terminals. Inserting the screwdriver will provide enough pressure to release the tab locks. To replace the cover, align the cover with the input terminals and press down until the cover snaps into place.
4.3 INPUT WIRING

**CAUTION:** Power input common is NOT isolated from user and input commons. In order to preserve the safety of the meter application, the power input common must be suitably isolated from hazardous live earth referenced voltage; or input common must be at protective earth ground potential. If not, hazardous voltage may be present at the signal or user inputs and input common terminals. Appropriate considerations must then be given to the potential of the user and input commons with respect to earth ground; and the common of the plug-in cards with respect to input common.

Before connecting signal wires, the Input Range Jumper should be verified for proper position.

5.0 REVIEWING THE FRONT BUTTONS AND DISPLAY

**BUTTONS**
- **SEL**: Display Mode Operation
- **RST**: Index display through enabled values

**ENTERING PROGRAM MODE**
- **Press and hold for 2 seconds to activate**

**PROGRAMMING MODE OPERATION**
- **Store selected parameter and index to next parameter**
- **Advances through the program menu**
- **Increments selected parameter value or selection**

**OPERATING MODE DISPLAY DESIGNATORS**
- **MAX** - Maximum display capture value
- **MIN** - Minimum display capture value

Pressing the **SEL** button toggles the meter through the selected displays. If display scroll is enabled, the display will toggle automatically every four seconds between the enabled display values.

6.0 PROGRAMMING THE METER

**OVERVIEW**

**PROGRAMMING MENU**

**PROGRAMMING MODE ENTRY (SEL BUTTON)**
It is recommended all programming changes be made off line, or before installation. The meter normally operates in the Display Mode. No parameters can be programmed in this mode. The Programming Mode is entered by pressing and holding the **SEL** button. If it is not accessible then it is locked by either a security code, or a hardware lock.

**MODULE ENTRY (SEL & RST BUTTONS)**
The Programming Menu is organized into separate modules. These modules group together parameters that are related in function. The display will alternate between **Pro** and the present module. The **RST** button is used to select the desired module. The displayed module is entered by pressing the **SEL** button.

**MODULE MENU (SEL BUTTON)**
Each module has a separate module menu (which is shown at the start of each module discussion). The **SEL** button is pressed to advance to a particular parameter to be changed, without changing the programming of preceding parameters. After completing a module, the display will return to **Pro** displayed. Programming may continue by accessing additional modules.

**SELECTION / VALUE ENTRY**
For each parameter, the display alternates between the present parameter and the selections/values for that parameter. The **RST** button is used to move through the selections/values for that parameter. Pressing the **SEL** button, stores and activates the displayed selection/value. This also advances the meter to the next parameter.

For numeric values, press the **RST** button to access the value. The right hand most digit will begin to flash. Pressing the **RST** button again increments the digit by one or the user can hold the **RST** button and the digit will automatically scroll. The **SEL** button will advance to the next digit. Pressing and holding the **SEL** button will enter the value and move to the next parameter.

**PROGRAMMING MODE EXIT (SEL BUTTON)**
The Programming Mode is exited by pressing the **SEL** button with **Pro** displayed. This will commit any stored parameter changes to memory and return the meter to the Display Mode. (If power loss occurs before returning to the Display Mode, verify recent parameter changes.)

**PROGRAMMING TIPS**
It is recommended to start with Module 1 and proceed through each module in sequence. When programming is complete, it is recommended to record the parameter programming and lock out parameter programming with the user input or programming security code.

**FACTORY SETTINGS**
Factory Settings may be completely restored in Module 2. This is useful when encountering programming problems.

**ALTERNATING SELECTION DISPLAY**
In the explanation of the modules, the following dual display with arrows will appear. This is used to illustrate the display alternating between the parameter on top and the parameter’s Factory Setting on the bottom. In most cases, selections and values for the parameter will be listed on the right.

![Indicates Program Mode Alternating Display](image)
- **Parameter**: Selection/Value
- **Factory Settings are shown.**
Select the input range that corresponds to the external signal. This selection should be high enough to avoid input signal overload but low enough for the desired input resolution. This selection and the position of the Input Range Jumper must match.

If the desired filter value is difficult to read due to small process variations or noise, increased levels of filtering will help to stabilize the display. Software filtering effectively combines a fraction of the current input reading with a fraction of the previous displayed reading to generate the new display.

The filter will adapt to variations in the input signal. When the variation exceeds the input filter band value, the filter engages again. This allows for a stable readout, but permits the display to settle rapidly after a large process change. The value of the band is in display units, independent of the Display Decimal Point position. A band setting of '0' keeps the filter permanently engaged at the filter level selected above.

General Notes on Scaling
1. When using the Apply (APL) scaling style, input values for scaling points must be confined to signal limits of the selected range.
2. The same Input Value should not correspond to more than one Display Value. (Example: 10 V can not equal 0 and 10.)
3. For input levels beyond the programmed Input Values, the meter extends the Display Value by calculating the slope from the two coordinate pairs (INP1 / dSP1 & INP2 / dSP2).
**USER INPUT FUNCTION**

- **DISPLAY MODE**
  - No Function: User Input disabled.
  - P-Loc: Program Mode Lock-out
  - Z-E-O: Zero Input (Edge triggered)
  - r-Et: Reset (Edge triggered)
  - d-HLd: Display Hold
  - d-SEL: Display Select (Edge triggered)
  - d-LEU: Display Intensity Level (Edge triggered)
  - C-LO: Backlight Color (Edge triggered)

- **DESCRIPTION**
  - Zero the Input Display value causing the meter to capture the new MIN reading.
  - A delay helps to avoid false captures of sudden short spikes.

- **USER INPUT ASSIGNMENT**
  - **Access Code**
  - **Factory Service Operations**

**DISPLAY MODE**

- **DESCRIPTION**
  - Pr: Print Request
  - P-rSt: Print and Reset
  - rSt-1: Setpoint 1 Reset
  - rSt-2: Setpoint 2 Reset

**6.2 MODULE 2 - SECONDARY FUNCTION PARAMETERS (2-SEC)**

- **PARAMETER MENU**
  - **MAX DISPLAY ENABLE**
  - **HI-En**
  -  NO YES
  - Enables the Maximum Display Capture capability.

- **MAX CAPTURE DELAY TIME**
  - **HI-E**
  - 00 to 9999 seconds
  - When the Input Display is above the present MAX value for the entered delay time, the meter will capture that display value as the new MAX reading. A delay time helps to avoid false captures of sudden short spikes.

- **MIN DISPLAY ENABLE**
  - **LO-En**
  -  NO YES
  - Enables the Minimum Display Capture capability.

- **MIN CAPTURE DELAY TIME**
  - **LO-E**
  - 00 to 9999 seconds
  - When the Input Display is below the present MIN value for the entered delay time, the meter will capture that display value as the new MIN reading. A delay time helps to avoid false captures of sudden short spikes.

- **FACTORY SERVICE OPERATIONS**
  - **FCS**
  -  NO YES
  - Select YES to perform either of the Factory Service Operations shown below.

- **RESTORE FACTORY DEFAULT SETTINGS**
  - **Code**
  - 66
  - Entering Code 66 will overwrite all user settings with the factory settings. The meter will display r-5Et and then return to 00. Press the SEL button to exit the module.

- **VIEW VERSION DISPLAY**
  - **Code**
  - 50
  - Entering Code 50 will display the version (x.x) of the meter. The display then returns to 00. Press the SEL button to exit the module.

**CALIBRATION**

The CUB5P uses stored calibration values to provide accurate voltage and current measurements. Over time, the electrical characteristics of the components inside the meter could slowly change, therefore the stored calibration values may no longer accurately define the input circuit. For most applications, recalibration every 1 to 2 years should be sufficient.

Calibration of the CUB5P involves a voltage or current calibration, which should only be performed by individuals experienced in calibrating electronic equipment. Allow a 30 minute warm up for equipment and unit before performing any calibration related procedures. The following procedures should be performed at ambient temperature of 15 to 35°C (59 to 95°F).

**CAUTION:** The accuracy of the calibration equipment will directly affect the accuracy of the CUB5P.

**Calibration**

1. Connect the negative lead of a precision DC source with an accuracy of 0.01% or better to the COMM. Leave the positive lead of the DC source unconnected.
2. With the display at 00, press and hold the SEL button for 2 seconds. Unit will display rSt and press the RST button to select the range to be calibrated.
3. Press the SEL button. Display reads 00 (00 = 0V for voltage).
4. Press the SEL button. Display reads 00 (00 = 0A for current).
5. Apply 0 signal:
   - **Current:** Leave the positive lead of the DC source unconnected.
   - Voltage: apply a short to the input or connect the positive lead of the DC source to INP+ and set the source to 0.
6. Press SEL. Display reads 00 for about 8 seconds.
7. Repeat steps 3 through 6 for each input range to be calibrated. When display reads 00, press the SEL button to exit calibration.
The Security Code determines the programming mode and the accessibility of programming parameters. This code can be used along with the Program Mode Lock-out (P-Loc) in the User Input Function parameter (Module 1).

Two programming modes are available. Full Programming mode allows all parameters to be viewed and modified. Quick Programming mode permits only the Setpoint values to be modified, but allows direct access to these values without having to enter Full Programming mode.

Programming a Security Code other than 0, requires this code to be entered at the CodE prompt in order to access Full Programming mode. Depending on the code value, Quick Programming may be accessible before the CodE prompt appears (see chart).

6.4 MODULE 4 - SETPOINT OUTPUT PARAMETERS (4-SPt)

PARAMETER MENU

The Setpoint Output Parameters are only active when an optional output module is installed in the meter.

SETPOINT SELECT

Enter the setpoint (output) to be programmed. The n in the following parameters will reflect the chosen setpoint number. After the chosen setpoint is completely programmed, the display will return to SPSEL. Repeat steps for each setpoint to be programmed. Select NO to exit the module. The number of setpoints available is setpoint output card dependent.

SETPOINT VALUE

Enter the desired setpoint value. The decimal point position for the setpoint and hysteresis values follow the selection set in Module 1.

HYSTERESIS VALUE

Enter desired hysteresis value. See Setpoint Output Figures for visual explanation of how setpoint output actions (balanced and unbalanced) are affected by the hysteresis. When the setpoint is a control output, usually balanced hysteresis is used. For alarm applications, usually unbalanced hysteresis is used. For unbalanced hysteresis modes, the hysteresis functions on the low side for high acting setpoints and functions on the high side for low acting setpoints.

Note: Hysteresis eliminates output chatter at the switch point, while time delay can be used to prevent false triggering during process transient events.

ON TIME DELAY

Enter the time value in seconds that the output is delayed from turning on after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

OFF TIME DELAY

Enter the time value in seconds that the output is delayed from turning off after the trigger point is reached. A value of 0.0 allows the meter to update the output status per the response time listed in the Specifications.

OUTPUT RESET ACTION

Enter the reset action of the output. See figure for details.

\( R_{\text{Auto}} \) = Automatic action; This action allows the output to automatically reset off at the trigger points per the Setpoint Action shown in Setpoint Output Figures. The "on" output may be manually reset (off) immediately by the front panel RST button or user input. The output remains off until the trigger point is crossed again.

\( LR_{\text{CH}} \) = Latch with immediate reset action; This action latches the output on at the trigger point per the Setpoint Action shown in Setpoint Output Figures. Latch means that the output can only be turned off by the front panel RST.
The Serial Setup Parameters are only active when one of the optional serial communications/programming cards is installed in the meter. Refer to the CUB5COM bulletin for details and setup for the CUB5 RS232 or RS485 serial communications. Refer to the CUB5USB bulletin for details on the CUB5 USB programming and programming requirements.

LIMITED WARRANTY

(a) Red Lion Controls Inc., Sixnet Inc., N-Tron Corporation, or Blue Tree Wireless Data, Inc. (the “Company”) warrants that all Products shall be free from defects in material and workmanship under normal use for the period of time provided in “Statement of Warranty Periods” (available at www.redlion.net) current at the time of shipment of the Products (the “Warranty Period”). EXCEPT FOR THE ABOVE-STATED WARRANTY, COMPANY MAKES NO WARRANTY WHATSOEVER WITH RESPECT TO THE PRODUCTS, INCLUDING ANY (A) WARRANTY OF MERCHANTABILITY; (B) WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE; OR (C) WARRANTY AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS OF A THIRD PARTY; WHETHER EXPRESS OR IMPLIED BY LAW, COURSE OF DEALING, COURSE OF PERFORMANCE, USAGE OF TRADE OR OTHERWISE. Customer shall be responsible for determining that a Product is suitable for Customer’s use and that such use complies with any applicable local, state or federal law.

(b) The Company shall not be liable for a breach of the warranty set forth in paragraph (a) if (i) the defect is a result of Customer’s failure to store, install, commission or maintain the Product according to specifications; (ii) Customer alters or repairs such Product without the prior written consent of Company.

(c) Subject to paragraph (b), with respect to any such Product during the Warranty Period, Company shall, in its sole discretion, either (i) repair or replace the Product; or (ii) credit or refund the price of Product provided that, if Company so requests, Customer shall, at Company’s expense, return such Product to Company.

(d) THE REMEDIES SET FORTH IN PARAGRAPH (c) SHALL BE THE CUSTOMER’S SOLE AND EXCLUSIVE REMEDY AND COMPANY’S ENTIRE LIABILITY FOR ANY BREACH OF THE LIMITED WARRANTY SET FORTH IN PARAGRAPH (a).
Press and hold SEL button to enter Programming Mode.
