N-View™ 2 For Multi-unit Monitoring and Firmware Management

N-Tron® Series NT5000

LinkedIn, X, Facebook, and Instagram:

Upgrade your networking today and unlock the incredible features of the NT5000. 🗝️

- ⚡ N-View™ 2 discovery quickly identifies N-View enabled devices
- ⚡ Easy-to-read monitoring pages display switch status, port traffic, and other indicators that point to potential cabling or configuration issues
- ⚡ Implementing the latest firmware is an important step in securing your network and maximizing its performance
- ⚡ N-View™ 2 simplifies firmware updates by allowing individual switches or user-defined groups to be updated immediately or scheduled for a future date and time

Graphical Alarm Notification for maximizing uptime.

N-Tron® Series NT5000

LinkedIn, X, Facebook, and Instagram:

Get ready for the ultimate networking experience with the N-Tron® Series NT5000 switch enhancements! 🤖🌟

This powerful switch comes with a configurable contact relay, allowing you to set up alarm notifications for a variety of conditions. Whether it's power conditions, port link downs, port usage, or N-Ring conditions—so you'll stay on top of your network at all times. 📧🔒

Not only can you customize the alarm settings, but you can also choose whether to display LEDs as alarm indicators or send notifications to the event or external server. You have full control over the severity level for each condition, ensuring you're always in the loop. ☑️🔒

Upgrade your networking today and discover the NT5000's amazing features. Click the link to learn more: <https://okt.to/qXux0i>

Now available with
**N-Ring™ Manager and DHCP
Server!**

N-Tron® Series NT5000

RL
RED LION®

LinkedIn, X, Facebook, and Instagram:

Discover the new and improved NT5000 Switches with the renowned N-Ring™ technology, and DHCP Server, providing high-speed redundancy and increased usability to the award-winning Industrial Ethernet switch series. 📌📄

🔗 The N-Ring™ Manager adds reliability to these standout switches, with fast ring healing times of ~30ms to prevent disruptions. Robust ring management and diagnostic tools provide notification of a break as well as a detailed fault map.

🔗 The new firmware also includes a DHCP Server for automatic IP address assignments. Support for DHCP Server option 61 and Relay agent with option 82 further simplifies the process of assigning IP addresses when field devices are moved or added to the network.
