Panel meters should be evolving just like other automation devices, providing a clear and easy installation and upgrade path.

👉With the PM-50, this starts at the installation of the device itself, as it was built to easily fit into where your old panel meter was.

👉Its intuitive nature and built-in Wi-Fi makes it easy to get data from the device to your smart device using the Red Lion app.

👉It also offers wired connectivity via Ethernet and Modbus. In addition, it offers wireless communication via Wi-Fi, meaning you won't have to run additional wires to connect devices.

This will allow you to create a "data infrastructure" within your workspace.
